Teams & channels

Keep teams, callsigns and approved channel labels together, then apply a reviewed plan to the radios and people on a job. This tool does not programme radios.

Owner-test edition. The final Windows release and pricing remain subject to acceptance. Video walkthroughs are being updated; no obsolete video is presented as the current guide.

Follow the task

1. **Create the plan**

   Create a crew plan with a clear site, date and name. Add one row for each team or communication group you need.

2. **Use approved channel labels**

   Enter the channel labels agreed for the radios and operating authority. Add the team, callsign, lead and practical notes. A channel number entered here does not allocate a frequency or create a trunked system.

3. **Link the people and radios**

   Choose existing records where the plan offers Linked radio and Lead. Check the exact serial/tag and person; a similar display name is not a reliable identity.

4. **Apply to a job**

   Choose Apply to a job. Review each team/channel, recipient and radio, including spare radios. Confirm the exact plan revision. A radio already assigned to an incompatible active job must be resolved first.

5. **Check communications**

   Start the call-around check and record the response for each team. Keep a failed or missing response visible and resolve it before operational reliance.

6. **Keep revised plans explicit**

   Save and apply a reviewed revision when the deployment changes. Prior applied assignments remain in the job history. Do not rewrite a checked plan to disguise what was used earlier.

If something is unclear

I need programming settings

This is an operational plan. Use the radio manufacturer’s supported programming process and your approved system configuration.

A person or radio is unavailable

Check that it exists in this site and your authorised scope. Reconnect to read current records before repeating an action.

Keep original records and backups. For support, use Settings → Help and problem reports, or office@i-enterprise.co.uk. A problem report is not a backup.
